PROFESSIONAL SUMMARY

CCBA-certified Business Analyst who takes ownership of the problem before anyone asks. I have spent 3+ years across healthcare, media, and education walking into ambiguous situations, mapping what was broken, and leaving behind processes and dashboards that teams still use after I am gone. At Canadian Blood Services I owned change initiatives end to end in a regulated environment where a wrong requirement carries real operational consequences. That is the standard I hold myself to. Hands-on with SQL, Power BI, Tableau, BPMN 2.0, and workflow automation.

SKILLS

Business Analysis: Requirements elicitation, BRD/FRD, functional requirements, user stories, acceptance criteria, UAT, stakeholder management, change management, gap analysis, root cause analysis, process improvement

Data & Analytics: SQL (joins, aggregation, validation), Power BI, Tableau, Excel (advanced), KPI dashboards, reporting automation

Process & Delivery: As-Is/To-Be mapping, BPMN 2.0, Agile/Scrum, Waterfall, sprint planning, backlog management, Jira, Confluence, Lucidchart, n8n, SharePoint

PROFESSIONAL EXPERIENCE

Junior Business Analyst — Canadian Blood Services (Contract)

May 2025 – April 2026 | Toronto, ON

- Partnered with stakeholders across 3 operational teams to document current-state workflows, identify root causes of reporting failures, and translate findings into requirements for 5+ change initiatives in a regulated healthcare environment.
- Designed 12 UAT test scenarios, facilitated end-to-end user testing, and caught 3 critical data issues before go-live that would have caused downstream reporting failures.
- Took end-to-end ownership of 5+ change initiatives — from first stakeholder conversation through UAT sign-off and post-launch support — producing BRDs and functional specifications and staying accountable through validation and adoption until users were fully self-sufficient.

Business Analyst — Canadian Jeweller Magazine

Oct 2023 – Aug 2024 | Toronto, ON

- Redesigned end-to-end publishing and reporting workflows, cutting manual reporting time by 40% and improving data reliability for leadership from discovery through go-live.
- Built KPI dashboards tracking performance across 4 audience and revenue channels. Before these dashboards, leadership made editorial and commercial decisions without consistent data. After, they had a weekly view they could actually act on.
- Led change management for new reporting tools — trained end users, ran adoption sessions, managed stakeholder resistance, and maintained a prioritised improvement backlog until the team was fully self-sufficient.

Strategy Analyst — Edureka

Jun 2022 – Aug 2023 | India

- Built Excel and Tableau dashboards tracking enrollment, revenue, and engagement KPIs. Leadership adopted them as the standard for weekly reviews because for the first time the numbers they needed were in one place — cutting decision turnaround by 20%.
- Uncovered 3 process and market gaps through structured competitive analysis and built the business case that directly shaped a course expansion strategy — resulting in a 15% enrollment increase over two quarters.

SELECTED PROJECTS

Hudson's Bay Decline Analysis — KPI Case Study github.com/Singhakash9/Hudsons-Bay-Business-Analysis

Analysed 9 years of KPI data across financial, operational, and customer dimensions; built a root cause framework and modelled a \$450M recovery scenario.

Healthcare Operations Analysis — Tableau github.com/Singhakash9/Tableau-Advancing-Healthcare-Analysis

Dashboards tracking patient wait times, clinic ratings, and blood donation outcomes — turning operational data into visible, actionable performance gaps.

Retail Sales Analysis — SQL github.com/Singhakash9/Retail-Sales-Analysis-with-SQL

SQL queries uncovering customer behaviour patterns; identified 4 underperforming product categories and flagged inventory imbalances affecting sales velocity.
